Summary

Data Science Engineer with hands-on experience building end-to-end machine learning pipelines, including data preprocessing, model development, and deployment. Proficient in Python, Scikit-learn, and XGBoost, with practical exposure to MLOps tools such as FastAPI, Docker, and MLflow. Strong foundation in statistical analysis and predictive modeling, with a track record of delivering deployed, production-ready ML solutions.

Skills

Languages: Python, SQL

ML/DS Libraries: Scikit-learn, XGBoost, Pandas, NumPy, Matplotlib, Seaborn, Imbalanced-learn (SMOTE)

ML Techniques: Regression, Classification, Feature Engineering, EDA, Time Series Analysis, Hypothesis Testing

MLOps & Deployment: FastAPI, Docker, MLflow, Streamlit, Joblib

Tools: Git, GitHub, Jupyter Notebook, PostgreSQL

Cloud: AWS (Cloud Foundations)

Soft Skills: Problem Solving, Analytical & Critical Thinking, Communication, Team Collaboration, Adaptability, Time Management, Attention to Detail, Ownership

Experience

Data Science Intern

July 2025 – January 2026

Internship Studio

Vadodara, India

- Built a COVID-19 data analysis and forecasting system covering data collection, cleansing, EDA, visualization, and predictive modeling.
- Applied regression models (Linear Regression, Random Forest, XGBoost) for trend and time-series forecasting on health-care data.
- Delivered an interactive dashboard to support data-driven decision-making from historical and forecasted trends.

Projects

End-to-End MLOps Real Estate Prediction System

March 2026 – May 2026

- Built a full-stack ML pipeline (data ingestion to deployment) using Python, XGBoost, FastAPI, Docker, MLflow, and Streamlit.
- Achieved an R^2 score above 0.90 on the Ames Housing dataset using XGBoost regression.
- Deployed a containerized REST API for real-time predictions and tracked experiments using MLflow.

Loan Default Prediction System (End-to-End ML Deployment)

January 2026 – March 2026

- Developed a credit risk classification model using Logistic Regression and Random Forest, handling class imbalance with SMOTE.
- Evaluated models using accuracy, precision, recall, F1-score, and ROC-AUC; selected Random Forest as the best performer.
- Deployed the model via a Streamlit app for real-time default risk prediction (Low/Medium/High).

Education

B.Tech, Computer Science and Engineering

P. P. Savani University, Surat

CGPA/Score: 7.23

Certifications

- AWS Academy Graduate – Cloud Foundations
- Get Started with API Gateway – Skill Badge
- Machine Learning for Data Science Projects
